Metadiscourse features in Estonian, Latvian and Lithuanian: The case of endophoric markers

Numerous cross-linguistic studies have compared metadiscourse features in English and other languages (i.e. Norwegian, French, Spanish, Italian, Lithuanian, etc.), revealing similarities and differences in shaping authorial argumentation in various academic disciplines and cultures (Fløttum et al. 2006; Mur-Dueñas 2011; Šinkūnienė 2014; Donadio, Passariello 2022). The aim of the present study is to compare interactive metadiscourse features, namely the subcategory of endophoric markers, in Estonian, Latvian and Lithuanian. The study looks into the distribution and use of endophoric markers in the field of linguistics in the three languages, also reflecting upon writing traditions in the three Baltic states.

The data for the study was obtained from three self-compiled corpora representing Estonian, Latvian and Lithuanian languages. Each corpus contains 20–30 research articles from various linguistic journals. Data analysis was conducted by operationalizing Hyland's (2005) metadiscourse model of interactive and interactional resources. Endophoric markers were classified into units that denote previewing and reviewing of different parts of the text or direct the reader's attention to visual aids and examples.

The preliminary results show that endophoric markers in Estonian, Latvian and Lithuanian are less frequent than other interactive metadiscourse elements (e.g. transitions, code glosses); however, their frequencies vary across the three languages, which suggests a different concern of the writer to guide the reader through the text. The distribution of the subcategories of endophoric markers shows similarities in the three languages. One of the most frequent subcategories is reference to examples, which are numerous in linguistic research articles and should be organised in a consistent and reader-friendly manner. Thus, the present study discusses a number of language/culture and discipline specific factors determining the distributional properties of endophoric markers in the languages that were not compared before in terms of metadiscourse features and writing traditions (Leijen et al. 2023).
