## **TIMELY – WEB APPLICATION FOR EASY AND QUICK MEETING PLANNING**

### **Abstract.**

“Timely” is a WEB application designed for straightforward and quick meeting planning. Our product focuses on privacy like no one else in the market. For example, to protect a person’s privacy, we don’t even use email addresses for registration, unlike our main competitor Doodle. Most importantly our WEB application is open-source and published in GitHub, so the code can be fixed and new features added in a timely fashion. By using modern engineering solutions, like Laravel framework and seeking the highest standards for our customer’s data security by encrypting it with future-proof hashing algorithm bcrypt, we can proudly present the meeting scheduling application that allows you to manage all necessary functions for your meeting in one place: vote for a meeting time, include purpose, location and duration of a meeting and share the meeting link without the headaches!

**Key words:** *WEB application, meetings, privacy, open-source.*
