

DAMSS

DATA ANALYSIS
METHODS FOR SOFTWARE
SYSTEMS

15th Conference on

DATA ANALYSIS METHODS

for Software Systems

November 28–30, 2024

Druskininkai, Lithuania, Hotel “Europa Royale”

<https://www.mii.lt/DAMSS>

Co-Chairmen:

Prof. **Gintautas Dzemyda** (Vilnius University, Lithuanian Academy of Sciences)

Dr. **Saulius Maskeliūnas** (Lithuanian Computer Society)

Programme Committee:

Dr. **Jolita Bernatavičienė** (Lithuania)

Prof. **Juris Borzovs** (Latvia)

Prof. **Janis Grundspenkis** (Latvia)

Prof. **Janusz Kacprzyk** (Poland)

Prof. **Ignacy Kaliszewski** (Poland)

Prof. **Bożena Kostek** (Poland)

Prof. **Tomas Krilavičius** (Lithuania)

Prof. **Olga Kurasova** (Lithuania)

Assoc. Prof. **Tatiana Tchemisova** (Portugal)

Assoc. Prof. **Gintautas Tamulevičius** (Lithuania)

Prof. **Julius Žilinskas** (Lithuania)

Organizing Committee:

Dr. **Jolita Bernatavičienė**

Prof. **Olga Kurasova**

Assoc. Prof. **Viktor Medvedev**

Laima Paliulionienė

Assoc. Prof. **Martynas Sabaliauskas**

Prof. **Povilas Treigys**

Contacts:

Dr. Jolita Bernatavičienė

Analysis of the Concept of Reasoning

Darius Sabaliauskas

Institute of Data Science and Digital Technologies
Vilnius University

darius.sabaliauskas@mif.stud.vu.lt

The concept of „reasoning“ dates back over 2500 years, beginning with the ancient Greeks, who studied reasoning processes; Aristotle introduced the term „logos,“ meaning reason, argument, and logic (Anton, 1997). The Romans followed with „ratiocinatio,“ signifying reasoning or conclusions. In the Middle Ages, Thomas Aquinas used „disputatio“ and „argumentatio“ (Hoenen, 1997) to discuss reasoning, which Renaissance and Enlightenment thinkers like Descartes, Locke, and Hume further explored (Descartes, 2019; Locke, 1847; Hume, 2000). In the twentieth century, Bertrand Russell and Ludwig Wittgenstein formalized logic (Russell & Whitehead, 1910-1913; Wittgenstein, 2023) as the basis for reasoning structures, while Alan Turing laid the groundwork for computing machines capable of reasoning, establishing reasoning as a core area in artificial intelligence research. In the 21st century, this concept is now used in areas such as artificial intelligence, machine learning, natural language processing, task planning, and more. It is also applied in cognitive sciences and neuropsychology. The concept of reasoning has become interdisciplinary and is used in various fields, from academic disciplines such as mathematics and logic to professional environments where critical thinking and innovative problem-solving are required. This research examines the concept of reasoning as a multifaceted cognitive structure, with particular emphasis on abstract reasoning as a critical cognitive skill that enables individuals and artificial systems to recognize patterns, solve complex problems, and understand complex concepts without relying on concrete experiences. In our research, we conducted a bibliometric study to classify and summarise how the concept of reasoning has transformed over the past millennia, how it is currently applied, and its contribution to science, we used for this advanced bibliometric analysis an extensive Web of Science dataset (Zupic & Čater, 2015). This work

contributes to a broader and comprehensive study aimed at providing a high-level conceptual overview of the concept of reasoning, encompassing various perspectives, methodologies, and innovative approaches.
