# **STUDENTŲ MOKSLINĖS VEIKLOS TINKLO LXXVII KONFERENCIJA**

Vilnius, 2025 m. gegužės 16 d.

**PRANEŠIMŲ TEZĖS**

Leidinj sudarė VU MF Mokslo ir inovacijų  
skyriaus Studentų mokslinės veiklos  
koordinatorė Urtė ŽAKARYTĖ

### Mokslo komitetas:

doc. dr. Valdemaras Jotautas  
doc. dr. Diana Bužinskienė  
prof. dr. Violeta Kvedarienė  
prof. dr. (HP) Saulius Vosylius  
prof. habil. dr. (HP) Gintautas Brimas  
Jaun. m. d. Laura Lukavičiūtė-Navickienė  
asist. dr. Agnė Abraitienė  
gyd. rez. Domas Grigoravičius  
doc. dr. Indré Trečiokienė  
prof. dr. Vaiva Hendrixson  
doc. dr. Ieva Stundienė  
prof. dr. Eglė Preikšaitienė  
lekt. gyd. Andrius Apšega  
lekt. gyd. Karolina Žvirblytė-Skrebutienė

prof. dr. Pranas Šerpytis  
lekt. Artūras Mackevičius  
dr. Žymantas Jagelavičius  
doc. dr. Agnė Kirkliauskienė  
dr. Audra Brazauskaitė  
asist. dr. Diana Sukackienė  
asist. dr. Žilvinas Chomanskis  
doc. dr. Kristina Ryliškienė  
dr. Rokas Borusevičius  
doc. dr. Saulius Galgauskas  
jaun. asist. Andrius Žučenka  
Doc. dr. Birutė Brasiliūnienė  
doc. dr. Jaunius Kurtinaitis  
prof. dr. Eugenijus Lesinskas  
doc. dr. Goda Vaitkevičienė  
prof. dr. Alvydas Navickas

doc. dr. Rima Viliūnienė  
prof. dr. (HP) Edvardas Danila  
prof. dr. Nomeda Rima Valevičienė  
asist. dr. Tomas Aukštikalnis  
doc. dr. Vytautas Tutkus  
doc. dr. Danutė Povilėnaitė  
dr. Andrius Bleizgys  
prof. dr. Robertas Stasys Samalavičius  
dr. Agnė Jakavonytė-Akstinienė  
doc. dr. Jurgita Stasiūnienė  
Asist. dr. Arnas Bakavičius  
prof. dr. Gilvydas Verkauskas  
prof. dr. Sigita Lesinskienė  
asist. dr. Jelena Stanislavovienė  
prof. dr. (HP) Janina Tutkuvienė

### Organizacinis komitetas:

Ugnė Šilinskaitė  
Austėja Zubauskaitė  
Aida Kuznecovaitė  
Milda Kančytė  
Milvydė Marija Tamutytė  
Renatas Kedikas  
Fausta Timinskaitė  
Antanas Simonas Garuolis  
Gailė Mikalauskaitė  
Gabrielius Leščinskas  
Damian Luka Mialkowski  
Radvilas Jančiauskas  
Maksim Čistov  
Ugnė Mickutė  
Lina Bliudžiutė  
Augustė Melaikaitė

Mindaugas Smetaninas  
Rafal Sinkevič  
Raminta Kasteckaitė  
Ernestas Gulbickis  
Edgaras Zaboras  
BENAS Matuzevičius  
Sylvia Rogoža  
Rūta Valiukeničiūtė  
Agnė Vasiulytė  
Agata Bruzgul  
Valentinas Kūgis  
Gabrielė Bielinytė  
Vėjas Vytautas Jokubynas  
Matas Kuncė  
Gintė Grubliauskaitė  
Milda Černytė

Julija Grigaitytė  
Dovydas Stankovičius  
Patricija Griškaitė  
Povilas Jurgutavičius  
Gediminas Gumbis  
Joana Leščevskaja  
Gabija Marčiulaitytė  
Augustinas Stasiūnas  
Alicija Šavareikaitė  
Odeta Aliukonytė  
Milda Eleonora Griciūtė  
Robertas Basijokas  
Elvin Francišek Bogdzevič  
Rokas Dastikas

## IMPACT OF TYPE 1 DIABETES AND CHRONIC STRESS ON HEPATIC HISTOMORPHOLOGY

**Author.** Anna Franziska RUDHART, II course.

**Supervisors.** Prof. Dr. Renata ŠIMKŪNAITĖ-RIZGELIENĖ, Assoc. Prof. Dr. Rūta VOSYLIŪTĖ, VU MF Institute of Biomedical Sciences, Department of Anatomy, Histology and Anthropology.

**Aim.** Diabetes mellitus is known to cause liver weight changes, as well as histological tissue changes, such as inflammatory cell infiltration and an increase in fibrosis. Inflammation and fibrosis in the liver may likewise be caused by stress conditions. This study aims to demonstrate histomorphological changes in liver tissue aggregate caused by diabetes and stress.

**Methods.** Histological analysis of liver specimens was performed after a scientific experiment involving groups of rats: Control group ( $n=9$ ) (no diabetes, no stress), Stress group ( $n=9$ ) was subjected to chronic psychological stress; T1DM group ( $n=8$ ) obtained streptozotocin-induced type 1 diabetes mellitus; T1DM+Stress group ( $n=9$ ) was subjected to both diabetes and stress. After euthanasia, the rats' livers were weighed, H&E slides were prepared, and histological analysis was performed using the QuPath programme. The total section area, as well as fibrotic and inflamed areas, were manually marked and automatically measured. The percentage of fibrotic and inflamed areas was then calculated. A t-test was performed, comparing the mean values of weight, fibrosis and inflammation between the groups.

**Results.** The data showed a statistically significant increase in liver weight in the Stress group in comparison to all the other groups ( $p <0.05$ ). All experimental groups showed a statistically insignificant increase in fibrosis compared to the Control group ( $p >0.05$ ). Inflammation was more prominent in all experimental groups compared to the Control group, with a statistically significant increase of inflammation in non-diabetic stressed rats (Stress group) compared to the Control group ( $p =0.0051$ ) and the T1DM+Stress group ( $p =0.0054$ ).

**Conclusions.** Although chronic stress may promote liver fibrosis and inflammation in diabetes, worsening hepatic damage, it may trigger certain adaptive responses, such as anti-fibrotic and anti-inflammatory effects.

**Keywords.** Chronic stress; diabetes mellitus; liver fibrosis.
